

THE INDIA HEALTH INFORMATICS PROJECT

**REPORT IV: Sustainable Development
Goals and India: SDG-3 and beyond (Health
and its determinants)**

MAY 18 2019

Authored by: Dr. Rohan D'Souza

Company: MedTive

Executive Summary

Democratizing Health Informatics in India

If you work in healthcare, you would know how difficult it is to source reliable data. Whether you're a student working on a project or a thesis, or a clinician or a researcher working on a manuscript or even a Marketer or industry professional exploring market opportunities. This is a problem we have faced inextricably over the years. Data in India exists in silos across the web and tends to get lost in clunky websites making it close to impossible to dig out. My objective is to put together these various databases and create a [centralized go-to healthcare repository](#). This is the first of a series of documents. In essence, I hope to socialise the platforms we have used for secondary research in the past, in the hope that it eases the access to data for anyone working in healthcare.

The Sustainable Development Goals (SDGs), otherwise known as the Global Goals, are a global call to action to end poverty, protect the planet and ensure that all people enjoy peace and prosperity. These 17 Goals have their foundation in the Millennium Development Goals along with newer focus areas such as climate change, economic inequality, innovation, sustainable consumption, peace and justice, among other priorities. The goals are interconnected – often the key to success on one will involve tackling issues more commonly associated with another.

Although only SDG-3 directly relates to Health and Wellbeing, all the SDGs play a significant role in the road to 'Health' as vital determinants toward this global, and country specific role. Given the global focus, there are some incredible data visualization tools focusing on these goals and offer a snapshot of India's progress vis-à-vis other countries around the world.

About The Author

Rohan D'Souza is a clinician trained at St. John's National Academy of Health Sciences, Bangalore. He has encapsulated varied experiences across healthcare in Clinical Medicine, Unmet Need Research, Pharmaceuticals, Medical Devices, InsureTech and Health Policy with organizations such as Pfizer, The Lemelson Foundation and InnAccel Technologies, Fedo.AI and YLAC. He is the co-Founder of Medtive. He nurtures an ambition to integrate these experiences and transform healthcare by enabling access to value-based care, at the intersection of Medicine and Technology in India. He is an incoming dual degree candidate, MBA & Masters in Public Health, at the UC Berkeley Haas School of Business and Berkeley School of Public Health (2019-2021).
